## ALIGNMENTS

Novel P-PII genes capable of regulating plant nitrogen assimilation, useful for transgenic plant production, and as probes for isolating additional genomic clones having P-PII gene promoters. Castor bean, PII; plant nitrogen regulatory gene, P-PII; nitrogen assimilation; transgenic plant; herbicide screening; ss. BP Hsieh M; 97US-00899330. 96US-0022328P. AAF58582 standard; cDNA; 897 Ricinus communis P-PII cDNA. (UKNY ) UNIV NEW YORK STATE. Coruzzi GM, Lam H, WPI; 2001-158572/16 Ricinus communis. P-PSDB; AAB69496 US6177275-B1 23-JUL-1997; 24-JUL-1996; 23-APR-2001 23-JAN-2001 AAF58582; RESULT 1 AAF58583 

The present sequence encodes a nitrogen regulatory PII protein. Novel plant PII (also called P-PII) nucleotide sequences have been isolated. They are useful for regulating nitrogen assimilation in plants, and in transgenic plant production. They are also used to engineer organisms that overexpress wild-type or mutant P-PII regulatory proteins. P-PII proteins are useful for in vitro screening of herbicides. P-PII nucleotides may be used as probes for isolating additional genomic clones with the promoters of P-PII genes. P-PII promoters are light- and/or sucrose-inducible, and are suitable for genetic engineering of plants

Claim 2; Fig 13; 35pp; English.

The present sequence encodes a nitrogen regulatory PII protein. Novel plant PII (also called P-PII) nucleotide sequences have been isolated. They are useful for regulating nitrogen sesimilation in plants, and in transgenic plant production. They are also used to engineer organisms that overexpress wild-type or mutant P-PII regulatory proteins. P-PII proteins are useful for in vitro screening of herbicides. P-PII uncleotides may be used as probes for isolating additional genomic clones with the promoters of P-PII promoters are light—and/or sucrose-inducible, and are suitable for genetic engineering of plants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a nitrogen regulatory PII protein. Novel plant PII (also called P-PII) nucleotide sequences have been isolated. They are useful for regulating introgen assimilation in plants, and in transgenic plant production. They are also used to engineer organisms that overexpress wild-type or mutant P-PII regulatory proteins. P-PII proteins are useful for in vitro screening of herbicides. P-PII nucleotides may be used as probes for isolating additional genomic clones with the promoters of P-PII genes. P-PII promoters are light, and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         45 GAATTCGGCACGAGGCTACTGCGAAACTGGGCTTGCTCACTCCTCTTCATTAACA 104

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
transgenic plant production. They are also used to engineer organisms that overexpress wild-type or mutant P-PII regulatory proteins. P-PII proteins are useful for in vitro screening of herbicides. P-PII nucleotides may be used as probes for isolating additional genomic clones with the promoters of P-PII genes. P-PII promoters are light- and/or sucrose-inducible, and are suitable for genetic engineering of plants
                                                                                                                                                                                                                                                                                                                                                                                                             472

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell production of transgenic plants. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to absolic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

   specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis

                                                                                                                                                                                                                                                                                                                                111
                                                                                                                                                                                                                                                                                                                                                                                               171
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            348
                                 The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents DNA encoding an A. baumannii

                                                                                                                                                     proteins from Photorhabdus luminescens. The isolated sequences are proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypetrides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. cecombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The cecombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens and the proteins are as virulence biopesticides. Other uses of the genes and the proteins are as virulence are sensitive to P. luminescens and indicates for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       509

The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for tracting or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABZ37706-ABZ42016 represent nucleic acid molecules of the invention

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent

Isolated nucleotide sequences of Neisseria meningitidis which can be in the diagnosis and treatment of N. meningitidis infection and other Neisserial infections, for example, N.gonorthoea.

```
cc specifically claimed Neisseria meningitidis genomic DNA sequences;
AAA81260 to AAA81303 and AAB25620 to AAB2563 represent Neisseria DNA
sequences and their corresponding proteins; AAA8124 to AAA81259 and
AAA81304 to AAA8121 represent PCR primers used in the isolation of
Neisseria meningitidis DNA sequences; and AAA8132 to AAA81452 represent
CC Neisseria meningitidis DNA sequences; and AAA8132 to AAA81452 represent
CC Neisseria meningitidis DNA sequences; and AAA8132 to AAA81452 represent
CC Neisseria meningitidis DNA sequences; and an uncleic acid
cused in the exemplification of the present invention. The nucleic acid
csequences, protein sequences, and antibodies against them, can be used in
the manufacture of a composition can be used as a
medicament (or in the manufacture of a medicament) for treating,
preventing or diagnosing infection due to Neisserial bacteria. For
example, some of the identified proteins could be components of vaccines
cc example, some of the identification of sequences from the bacterium
will also facilitate production of biological probes, particularly
cc organism-specific probes, Attempts to make efficacions Meningococcus B
cvaccines have failed mainly due to antigen tolerance. Multivalent
cvaccines have also been tried but none have successfully overcome
cc antigenic variability. The provision of futher, complete sequences may
crowide an opportunity to identify secreted or surface exposed proteins
cc that may be presumed targets for the immune system and which are not
considered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13663 AAATCGGCATTACGGGCATGACCGTCAGCGAGGTCAAAGGGTTCGGCAGGAGGGGC 13722

//clone lib land land state for an analysis of a further state of an analysis of a further state of an analysis of a further state weekly with 1/2 Hoadlands solutions containing 20um potassium phosphate. CDNA was prepared from polyatenticked RNA. The CDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using interest.

/Globella Seeds / Callected from pods ranging in age from 11 to 19 days after pollination, were harvested from greenhouse-grown plants. Seeds were removed and greenhouse-grown plants. Seeds were removed and separated from pod walls and were immediately frozen in liquid nitrogen. Seeds throughout the age range were pooled for mRNA extraction. CDNA was prepared from polyanciched RNA. The CDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Giapaex III Gold packaging extracts. Plasmids containing containing misers were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propogated in XLOLR cells."

BB823431 Gm-r1070 Glycine max cDNA clone Gm-r1070-7536 3',

mRNA sequence. BE823431

ACCESSION

LOCUS DEFINITION

```
Reracking was performed by Genome Systems, St. Louis, http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics, University of Illinois, University of Illinois, http://www.lincedh/keck.html. Note: The corresponding 5' EST from each clone in the Gm-r1070 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /done="dm-dx001304f"
/clone="fm-dx001304f"
/clone=|The library Gm-r1070 is a sequence-driven, reracked fore rithe library Gm-r1070 is a sequence-driven, reracked set of 9,216 clones selected from cDNA libraries from various tissues and stages of development of soybean that represent 2,639 sequences from immature cotyledons, 1,770 represent 2,639 sequences from immature cotyledons, 1,770 represent 1,639 sequences from immature seed coats, 3,938 from flowers, and 869 from young pode. The 5' ESTS of the source clones from the different libraries was used to select singletons, or a representative of each conting, which were reracked con library Gm-ri070. The cDNA clones of the reracked Gm-ri070 library were then sequenced at the 3' end. The conting analysis to select unique genes was performed by the laboratory of Ennest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://www.com.edu/ResearchProjects/Soybean/index.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     313
